24 SAP Add-ons developed by Axians

Axians supports companies worldwide in modernizing and optimizing their SAP landscapes, with extensive industry expertise, a global presence in over 30 countries, and deep know-how in SAP cloud solutions. In addition to ensuring a smooth transition from legacy systems to modern ERP cloud environments, we offer a portfolio of 24 highly integrated, innovative add-ons that create real added value - each originating from one of five different countries.

Axians stands for forward-looking SAP consulting, technological innovation, and collaborative partnerships at eye level. This is how we successfully guide you into the future. Your local Axians team is excited to connect with you soon.

Planning & Scheduling

NEO Schedule

The product for efficient resource planning based on SAP

NEO Schedule is a powerful planning solution for service and maintenance, enabling efficient scheduling, progress tracking, and quick response to changes. With drag & drop, system-assisted, or fully automated planning, it optimizes resource allocation while considering skills, material availability, and travel times. The user-friendly solution integrates seamlessly with SAP ERP, reducing planning effort significantly.

Solution Scope

- **Smart Deployment Planning** – Task overview with prioritization, target vs. actual comparison and deadline tracking
- **Visual Resource Management** – Dynamic scheduling board and interactive location map with drag-and-drop functionality
- **Optimized Route Planning** – Automatic travel time calculation for efficient tour planning

Business Process Covered

- Sales
- Manufacturing
- Supply Chain
- Service
- Asset Management
- Analytics
- Field Service Management
- Intelligent Technologies
- Sustainability

Customer Problems & Challenges

- **Balancing Urgent and Long-Term Tasks** – Difficulty finding planning solutions that handle both immediate jobs and long-term assignments.
- **Optimizing Resource Allocation** – Challenges assigning the right staff with appropriate skills, travel time, spare parts, and available capacity.
- **Providing Fast Planning Recommendations** – Struggle to give quick, accurate guidance to customers during the ticket process.

Benefits

- **Transparency** – Real-time insights for faster decision-making and quicker reactions
- **Higher First-Time-Fix Rate** – Boosts first-time resolution by up to 50%
- **Lower costs** – reduce planning and travel time, and increases productivity

From planning to performance – discover how NEO Schedule powers smarter scheduling at Viessmann.

Viessmann Climate Solutions | Germany

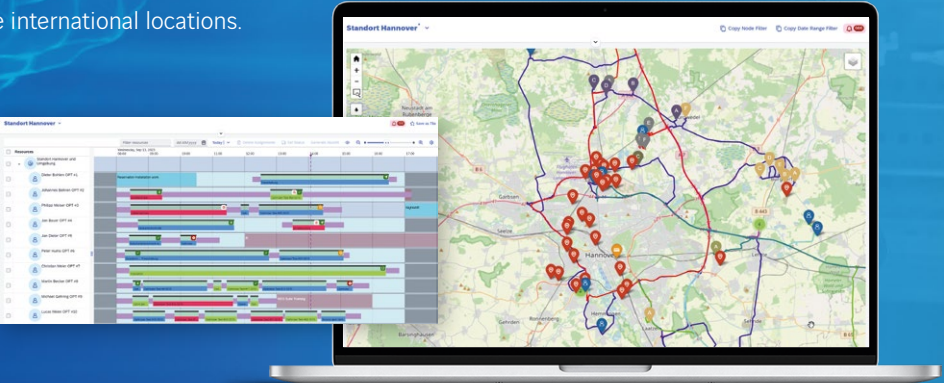

Accelerating Global Field Service with NEO Schedule

Customer

Viessmann Climate Solutions is a global leader in sustainable climate and energy solutions, providing heating, cooling, and industrial energy systems. Viessmann serves customers worldwide, ensuring optimal operation of technical building systems.

Solution

Axians implemented NEO Schedule to digitalize and optimize Viessmann’s global technical field service operations. By integrating AI-powered Optimizer into the SAP S/4Hana system, the solution enhances scheduling efficiency, streamlines service execution, and ensures seamless documentation and invoicing processes across multiple international locations.

Customer Benefits

- More jobs per technician through optimized route planning
- Better customer experience through completely automated appointment booking process
- Reduced numbers of second visits due to wrong skills or missing spare parts

Planning & Scheduling

Work Clearance Management for Mobile Devices

Secure Clearances, Anywhere – Mobile Control for Safer Workflows

The Work Clearance Management solution is an offline mobile application designed to support PM-WCM module processes. Developed based on customer best practices, it focuses on improving process safety and reducing lay-over times, enabling more efficient and secure work clearance operations on the go.

Solution Scope

- **Offline Mobile Support** – Enables work clearance processes without continuous network connection
- **PM-WCM Integration** – Fully aligned with SAP Plant Maintenance Work Clearance Management module
- **Customer-Driven Design** – Built on proven best practices tailored to operational realities

Business Process Covered

- Manufacturing
- Service
- Asset Management
- Intelligent Technologies

Customer Problems & Challenges

- **Defining Process Variants** – Need for straightforward definition of all work clearance process variants
- **Offline Operation** – Requirement for suitable hardware (mainly tablets) and reliable error handling in areas without internet connection

Benefits

- **Increased Safety** – Reduces risk and improves compliance
- **Greater Mobility** – Enables staff to manage clearances directly in the field, regardless of connectivity
- **Faster Processes** – Reduced waiting times and quicker approvals improve operational flow

eChange

Standardized or Ad-Hoc – Change Managed Your Way

eChange is a solution for managing all types of general change management – including process, organizational, and production changes. It provides a catalogue of standardized and custom changes, with the ability to build approval paths on the fly. Designed for flexibility, transparency, and control in dynamic environments.

Solution Scope

- **Processing and management** – Handles process, organizational, production, and other change types
- **Catalogue of standardized changes** – Supports predefined change types and custom entries
- **Ad-hoc building of approval path** – Enables flexible workflow creation based on specific needs

Business Process Covered

- Manufacturing
- R&D & Product Management
- IT Management
- Application Development & Integration Field Service Management
- Intelligent Technologies

Customer Problems & Challenges

- **Approval Workflow Challenges** – Unclear processes and limited visibility into decision history
- **Implementation Errors** – Frequent mistakes and inconsistencies during change execution
- **Communication Gaps** – Misalignment and poor coordination between departments
- **Audit & Compliance Difficulties** – Hard to maintain audit trails and meet regulatory requirements

Benefits

- **Structured change handling** – Brings order and consistency to change management processes
- **Faster execution** – Speeds up re-occurring changes with standardized templates
- **Flexible approval workflows** – Adapts to unique or complex change scenarios

Construction Suite

SAP CX for the Construction Industry

The larger the project, the greater the complexity – something well known in the construction and building supply industry. So how can project, service, or sales managers maintain a clear overview from planning through execution and operation? And how can complex construction projects be mapped in SAP CX? With the Construction Suite, it's possible: manage your projects centrally and end-to-end with SAP CX.

Solution Scope

- **Backend Integration –**
Enables true end-to-end business processes
- **Add-On Solutions –**
Extend functionality with flexible enhancements
- **Custom Solution Scope –**
Tailored to the licensed SAP CX components

Business Process Covered

- Sales
- Service
- Asset Management
- Enterprise Strategy
- Field Service Management

Customer Problems & Challenges

- **Dealership Lead Control –**
Challenges in tracking and managing dealer-generated leads
- **Complex Sales Cycles –**
Handling of multi-stage, long-duration sales processes

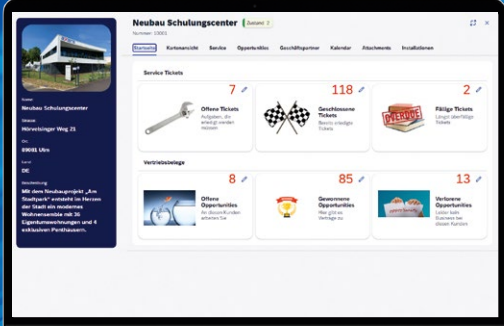

Benefits

- **Efficient Project Management –**
Handles complex construction projects across direct and dealer business
- **Seamless End-to-End Oversight –**
From the first sales lead through to service delivery
- **Clear Project Visualization –**
Supports transparency in long-term, process-driven projects

Dashboard

Manage complex construction projects with all relevant information in one place. Consolidate everything from initiation to after sales.

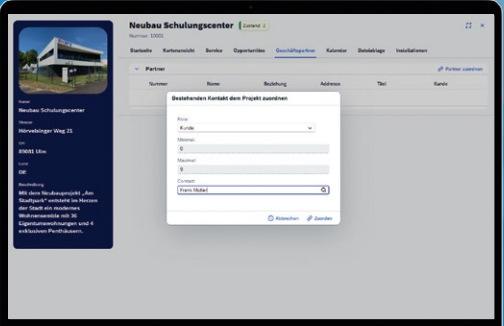

Documentation and Filing

Through our SharePoint integration, you have the possibility to store documents centrally and in a structured way within the construction project and thus ensure consistent documentation.

Project Calendar

Deadlines, appointments, and meetings of the project at a glance. Plan and track your project progress in a dedicated calendar.

Partner and Stakeholder Management

Documentation of stakeholders including roles and relations. Benefit from transparent mapping of all stakeholders, serving as a tool for targeted communication within the Construction Project.

Seamless End-to-End Oversight

Clear Project Visualization

Warehouse, Logistics & Supply Chain

FRONTO: Warehouse & Logistics Automation

Smart Logistics in Motion – Real-Time Data, Real-World Results

FRONTO is a warehouse, logistics and shopfloor automation solution enabling real-time data acquisition via barcode, RFID, or integration with external WMS or IoT. It streamlines warehouse, purchasing and shipping processes while ensuring traceability and optimized stock levels. Available for S/4HANA on-premise, private cloud, and ready for public cloud deployment, Fronto combines flexibility with performance - including short-term offline mode support.

Solution Scope

- ▶ **Multi-Source Data Capture** – Barcode, RFID, and external WMS integration for seamless information flow
- ▶ **Process Coverage** – Supports core logistics operations: warehouse management, purchasing, and shipping
- ▶ **SAP Integration** – Real-time operation in S/4HANA (on-prem, private cloud, and public-cloud ready)

Business Process Covered

- ▶ Procurement/Supply Chain
- ▶ Manufacturing
- ▶ Sales
- ▶ Service
- ▶ Asset Management
- ▶ Intelligent Technologies

Customer Problems & Challenges

- ▶ **Slow & Manual Processes** – Logistics workflows are delayed due to inefficient task management and manual handling.
- ▶ **Human Error & Compliance Risks** – Mistakes in task execution reduce accuracy, traceability, and auditability.
- ▶ **Limited Automation & Mobility** – Difficulty assigning tasks and preparing jobs in the WMS, with insufficient mobile or automated support

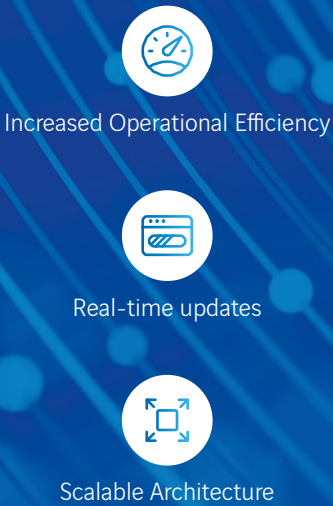

Benefits

- ▶ **Increased Operational Efficiency** – Automated data collection speeds up logistics workflows
- ▶ **Real-time updates** – Enhance traceability and process control
- ▶ **Scalable Architecture** – Fits different deployment models including public cloud readiness

Contact Person

Warehouse, Logistics & Supply Chain

FRONTO: Paperless shopfloor

Digitize Your Floor – Smarter, Faster, Paper-Free

FRONTO for Paperless Shopfloor is a real-time data acquisition solution supporting barcode, RFID, and IoT/MES integration. It digitizes processes in production, main-tenance, tooling, and quality control, offering full traceability and live monitoring. Available for S/4HANA on-prem, RISE, and ready for public cloud, it also supports extensions such as Andon panels and OEE monitoring for advanced production insights.

Solution Scope

- ▶ **Multi-Source Data Capture** – Barcode, RFID, and external WMS integration for seamless information flow
- ▶ **Process Coverage** – Supports core logistics operations: warehouse management, purchasing, and shipping
- ▶ **SAP Integration** – Real-time operation in S/4HANA (on-prem, private cloud, and public-cloud ready)

Business Process Covered

- ▶ Manufacturing
- ▶ Service
- ▶ Asset Management
- ▶ Intelligent Technologies

Customer Problems & Challenges

- ▶ **Limited Traceability** – Hard to track processes, responsibility, and production data across operations.
- ▶ **Inefficient Production** – Low OEE (overall equipment efficiency), high scrap, and excess stock slow workflows and increase costs.
- ▶ **Fragmented Information** – Lack of real-time shopfloor data hinders planning, quality, and decision-making.

Benefits

- ▶ **Paperless Efficiency** – Eliminates manual paperwork for faster, cleaner workflows
- ▶ **Real-Time Insights** – Supports instant monitoring and decision-making on the shopfloor
- ▶ **Enhanced Quality Control** – Live data improves accuracy and compliance in production

FRONTO: Asset Inventory

Reliable Asset Counts, Online or Off

FRONTO for Asset Inventory streamlines physical inventory processes through bar-code and RFID-based data acquisition. Designed for both online and offline use, it enables fast, accurate tracking of assets across locations. The solution is available for S/4HANA on-prem and private cloud, and is ready for public cloud deployment under GROW, ensuring flexibility and future scalability.

Benefits

- ▶ **Faster Inventory Process** – Speeds up asset counting and reduces administrative burden
- ▶ **Improved Accuracy** – Minimizes human error through digital identification
- ▶ **Flexible Deployment** – Fits a wide range of IT environments and field conditions

Solution Scope

- ▶ **Barcode & RFID Integration** – Fast and accurate asset identification during inventory cycles
- ▶ **Online & Offline Functionality** – Reliable performance even in low-connectivity environments
- ▶ **SAP Integration** – Compatible with S/4HANA on-prem, private cloud, and GROW public cloud model

Business Process Covered

- ▶ Finance
- ▶ Asset Management
- ▶ IT Management

Customer Problems & Challenges

- ▶ **Slow Asset Inventory** – Difficulty managing and completing inventory counts efficiently
- ▶ **Asset Tracking Issues** – Challenges identifying misplaced or mismanaged assets

Tobacco Track n' Trace

Full control and compliance across every step of the supply chain

The Tobacco Track n' Trace solution ensures seamless integration into the customer's storage and distribution processes. Fully aligned with corporate data security standards, it offers transparency and traceability throughout the supply chain. The hybrid setup combines SAP ERP and SAP BTP technologies for a flexible and scalable implementation.

Benefits

- ▶ **Regulatory Compliance** – Ensures full alignment with local & corporate traceability and reporting requirements
- ▶ **Enhanced Supply Chain Transparency** – Real-time product tracking from storage to distribution
- ▶ **Scalable Solution Design**

Solution Scope

- ▶ **Track & Trace Integration** – Seamless incorporation of tracking functions into storage and distribution workflows
- ▶ **Secure Data Handling** – Compliance with corporate standards for data protection and secure data exchange
- ▶ **Hybrid SAP Architecture** – Combination of SAP ERP for core operations and SAP BTP for enhanced flexibility and scalability

Business Process Covered

- ▶ Finance
- ▶ Manufacturing
- ▶ Supply Chain
- ▶ Analytics
- ▶ Application Development & Sustainability

Customer Problems & Challenges

- ▶ **Ensuring Full Traceability** – Difficulty tracking products across multiple storage and distribution facilities
- ▶ **Meeting Tight Compliance Deadlines** – Need for a scalable solution that delivers regulatory reporting and process integration quickly

Scalable Solution Design

Warehouse, Logistics & Supply Chain

Paperless solution

Less paper, more efficiency.

The Paperless Solution is designed to significantly reduce the volume of paper printouts during distribution processes, offering a more sustainable and efficient workflow. Initially implemented in a single pilot storage facility, the solution is designed for scalable roll-outs. It targets customers for whom a full-scale EWM (Extended Warehouse Management) implementation was not feasible, providing a lightweight yet impactful alternative. This approach simplifies operations while maintaining traceability and efficiency.

Solution Scope

- ▶ **Paperless Distribution Workflow** – Replacement of printed documents with digital alternatives across distribution processes
- ▶ **Lightweight System Architecture** – Tailored for environments where full EWM implementation is not viable
- ▶ **Scalable Roll-Out** – Pilot implementation in one storage facility with potential for broader deployment

Business Process Covered

- ▶ Finance
- ▶ Manufacturing
- ▶ Supply Chain
- ▶ Analytics
- ▶ Application Development & Sustainability

Customer Problems & Challenges

- ▶ **High Infrastructure and Licensing Costs** – Customers need to limit total expenses for system deployment and software licenses.
- ▶ **Steep Learning Curve for Staff** – Storage workers face long ramp-up times to efficiently use new systems.
- ▶ **Balancing Complexity and Stability** – Difficulty implementing a solution that is both feature-rich and reliable.

Benefits

- ▶ **Reduced Paper Consumption** – Supports sustainability goals and lowers operational costs
- ▶ **Faster Processing** – Digital workflows minimize delays and manual handling errors
- ▶ **Cost-Effective Alternative** – Delivers EWM functionalities without full system deployment

Compliance & Risk Management

SAP Security Audit

Consulting Solution for preventive defense management

SAP systems are the backbone of many companies - and therefore an attractive target for cyberattacks. With increasingly complex IT landscapes and growing compliance requirements, it is crucial to identify and close security gaps at an early stage. Our SAP Security Audit provides a comprehensive analysis of your entire system landscape. We not only examine obvious vulnerabilities but also dive deep into all security-critical areas of your SAP infrastructure to minimize risks holistically.

Solution Scope

- ▶ **360° Security Check** – Analysis & documentation of 234 security aspects by our experienced consultants
- ▶ **Complete Coverage** – ECC, S/4HANA, database, OS, and external interfaces
- ▶ **Audit focus topics** – SAP systems, networks & Interfaces, database & operating systems, SAP HANA speciality checks

Business Process Covered

- ▶ Supports all Business Processes

Customer Problems & Challenges

- ▶ **Regulatory Pressure** – Growing demands to comply with GDPR, NIS2, DSA, DMA, KRITIS, and other legal requirements
- ▶ **Cyberattack Threats** – Risk of data loss, extortion, or downtime from increasing cyberattacks
- ▶ **System Complexity** – Limited visibility across permissions, interfaces, and interconnected systems

Benefits

- ▶ **Transparency** – Clear overview of the security status of your SAP landscape
- ▶ **Recommendations for Action** – Prioritized measures for immediate implementation
- ▶ **Risk Mitigation** – Ideal foundation for protection against data loss, attacks, and compliance breaches

Compliance & Risk Management

A-Tax

Verify VAT ID numbers quickly and securely in SAP ERP and S/4HANA.

Businesses in the EU are legally required to verify VAT IDs for customers and suppliers, with stricter regulations now mandating documented validation. Non-compliance can result in severe tax consequences. Axians offers A-TAX, an SAP add-on that automates VAT ID checks via online interfaces for SAP ERP & S/4HANA. It ensures compliance by validating business partners and sales documents, providing full transparency and efficiency across the Lead-to-Cash process.

Benefits

- ▶ **Automated Compliance** – Ensures legal conformity and minimizes tax risks
- ▶ **Increased Efficiency** – Saves time with automated single and bulk validations
- ▶ **Transparency & Integration** – Seamless SAP integration with full audit logging

Solution Scope

- ▶ **Real-Time & Bulk VAT Validation** – Checks customer, supplier, and sales document IDs instantly and at scale
- ▶ **Compliance Assurance** – Auto-blocking, audit logging, and legal conformity
- ▶ **Flexible Integration** – Customizable to fit business processes

Business Process Covered

- ▶ Sales
- ▶ Finance
- ▶ Procurement
- ▶ Supply Chain
- ▶ Compliance
- ▶ Legal

Customer Problems & Challenges

- ▶ **Risk of non-compliance** – Companies must meet EU regulations
- ▶ **Time-consuming validation processes** – Verifying VAT IDs individually slows down operations
- ▶ **Manual error risk** – Human input errors during VAT validation jeopardize data quality

Sanction List Control

Compliance Made Easy for SAP ERP & S/4HANA

Ensuring compliance with EU regulations on terrorism prevention is a challenge for businesses. Manual checks are time-consuming and error prone. The Axians Sanction List Scanner automates the sanctions list screening directly in SAP S/4HANA, ensuring no transactions with restricted entities – all within SAP, without external services.

Benefits

- ▶ **Automated Compliance** – Real-time and batch screening of business partners
- ▶ **Seamless SAP Integration** – No data transfer to external providers, ensuring security
- ▶ **Efficient Workflows** – Automated alerts via SAP Workflow or email

Solution Scope

- ▶ **Sanctions List Check** – Automatic screening for orders, deliveries, and payments
- ▶ **Monitoring & Reporting** – Full traceability for audits.
- ▶ **Flexible Handling** – Individual approval or blocking of flagged partners

Business Process Covered

- ▶ Sales
- ▶ Finance
- ▶ Procurement
- ▶ Supply Chain
- ▶ Compliance
- ▶ Service
- ▶ HR
- ▶ Legal

Customer Problems & Challenges

- ▶ **Ensuring Regulatory Compliance** – Difficulty keeping up with EU sanctions regulations and avoiding restricted transactions.
- ▶ **Error-Prone Manual Checks** – High risk of missing restricted entities due to time-consuming manual processes.
- ▶ **Incomplete Audit Trails** – Manual documentation often fails to satisfy legal and audit requirements.

Smart Credit Info – Credit and VAT Payer Status

Credit and Tax Clarity –
Right Inside SAP

Smart Credit Info is an integrated solution that connects SAP systems to credit and tax authority portals. It verifies creditworthiness, taxpayer status, and blacklist presence via predefined connectors, with the flexibility to add custom sources. Embedded directly into SAP processes through modular plugins, it brings automation, compliance, and transparency to customer and vendor evaluations.

Solution Scope

- ▶ **Credit & Tax Portal Integration** – Automated access to up-to-date financial and tax data
- ▶ **Partner Status Verification** – Checks credit, taxpayer status, and blacklists using official sources
- ▶ **Predefined Connectors** – Ready-to-use integrations with option to add custom portals

Business Process Covered

- ▶ Sales
- ▶ Finance
- ▶ Procurement
- ▶ Service
- ▶ Compliance

Customer Problems & Challenges

- ▶ **Keeping business partner credit and VAT status current** – Manual checks are slow, error-prone, and often outdated.
- ▶ **Delayed risk detection and integration** – Verification is disconnected from SAP processes, slowing decision-making and early warning

Benefits

- ▶ **Automated risk checks** – Reduces manual effort and response time in due diligence
- ▶ **Improved compliance** – Ensures updated Validation of credit and tax statuses
- ▶ **Standardized evaluations** – Applies consistent rules across partners and processes

Radioactive Waste Management

Safe. Smart. Traceable –
Managing Waste with Precision

The Radioactive Waste Management solution modernizes outdated legacy systems by introducing an SAP-based approach tailored to the specific demands of hazardous material handling. It supports key processes such as waste collection, transport consolidation, and radiation level calculation. Designed with regulatory compliance and operational safety in mind, the solution ensures full traceability and accurate data throughout the waste lifecycle. Its scalable and process-integrated design makes it a robust foundation for long-term, compliant waste management.

Solution Scope

- ▶ **SAP-Based Waste Management** – Modern replacement of legacy system for radioactive waste handling
- ▶ **Waste Collection Tracking** – Digital support for registration and tracking of radioactive material pick-up
- ▶ **Transport Conglomeration** – Consolidation of individual waste units into extended, compliant transport batches

Business Process Covered

- ▶ Manufacturing
- ▶ R&D & Product Management
- ▶ Service
- ▶ Asset Management
- ▶ Analytics
- ▶ Intelligent Technologies
- ▶ Sustainability

Customer Problems & Challenges

- ▶ **Safe System Operation in Hazardous Areas** – Difficulty using legacy or digital systems safely in environments with radioactive material.
- ▶ **Long-Term Data Retention** – Need to securely store waste records for decades to meet regulatory requirements.
- ▶ **Preventing Data Breaches** – Concerns over unauthorized access to sensitive radioactive waste information

Benefits

- ▶ **Enhanced Safety Compliance** – Supports strict regulatory standards for handling and transporting radioactive waste
- ▶ **Process Transparency** – Ensures traceability across the waste management lifecycle
- ▶ **Reduced Operational Risk** – Automated radiation calculations minimize human error

eInvoicing Cockpit

All invoices, one Cockpit

The eInvoicing Cockpit streamlines the end-to-end handling of outgoing invoices, attachments, and approvals. It enables PDF eSignatures, flexible distribution across multiple channels, and maintains full versioning of sent documents. A smart, centralized tool for efficient and compliant invoice processing.

Benefits

- ▶ **Faster invoice processing** – Streamlines steps from completion to dispatch
- ▶ **Improved compliance** – Supports digital signatures and audit-ready documentation
- ▶ **Traceability of invoice delivery** – Evidence of issued versions and invoice delivery methods

Solution Scope

- ▶ **Centralized Invoice Management** – Handles invoices and all supporting attachments in one place
- ▶ **Integrated Approvals** – Streamlines approval processes for credit memos and other special cases
- ▶ **PDF eSignature Integration** – Ensures authenticity and legal compliance of outgoing documents

Business Process Covered

e-Invoice Automation

Seamless e-Invoicing, Straight from SAP

eInvoice Automation is a native SAP-integrated solution for generating and sending electronic invoices in XML format, developed in close collaboration with SAP. It uses the UBL 2.1 standard and communicates through certified providers to ensure compliance. The solution supports both S/4HANA and SAP ECC, enabling automated, secure, and standardized e-invoicing at scale.

Benefits

- ▶ **Native SAP integration** – No need for third-party middleware or extensive customization
- ▶ **Reduced manual work** – Automates invoice generation and transmission
- ▶ **Eco-friendly** – Reduces paper usage and carbon footprint

Solution Scope

- ▶ **SAP e-Invoicing** – Sends electronic invoices directly from S/4HANA or SAP ECC in XML format
- ▶ **Flexible Provider Connectivity** – Connects to multiple certified service providers based on customer requirements

Workflow for Incoming Invoices

Smart invoice workflow with SAP & Axians

Custom-developed SAP Business Workflow for incoming invoices, integrated into MM and FI modules as well as common e-mail clients. The solution is scalable from small businesses to large enterprises and supports AI-based OCR via SAP BTP for efficient and automated invoice handling.

Benefits

- ▶ **Streamlined Invoice Processing** – Reduces manual effort & accelerates invoice handling cycles
- ▶ **Improved Accuracy** – AI-based OCR minimizes data entry errors
- ▶ **Enhanced User Experience** – Email integration simplifies user interaction & approval workflows

Solution Scope

- ▶ **SAP Business Workflow** – Custom-developed solution for automated processing of incoming invoices in MM and FI modules
- ▶ **Email Integration** – Seamlessly connected with common email clients for user-friendly approval and communication

AxDataCare

Intelligent Duplicate Check & Cleansing for All SAP and 3rd Party Solutions

Eliminate duplicates for cleaner, more efficient data management. Our intelligent tool seamlessly detects and removes duplicates, for example, in SAP S/4HANA Cloud or SAP Sales & Service Cloud V1/V2. It processes not only standard objects such as Accounts, Contacts, Cases, Leads & Opportunities but also custom objects & fields, optimizes workflows and enhances data quality - fast, precise, and fully customizable.

Benefits

- ▶ **Smart Duplicate Management** – saves time and effort
- ▶ **Clean & Efficient Data** – increases efficiency & data quality
- ▶ **Added value through optimized data** – Enhances processes, workflows & decision-making

Solution Scope

- ▶ **Tailored Data Processing** – Validates all data types, including custom objects and fields, with instant master data updates
- ▶ **Seamless SAP Integration** – Easily deployable across SAP and third-party solutions

Business Process Covered

- ▶ Sales
- ▶ Procurement
- ▶ Service
- ▶ Asset Management
- ▶ Application Development & Integration
- ▶ Field Service Management

Customer Problems & Challenges

- ▶ **Duplicate Records** – cause inefficiencies and unreliable reporting
- ▶ **Low Data Quality** - leads to manual effort and poor decisions

SAP Content Migration Server

Efficient and Secure Document Migration for SAP Archive Management

Our solution provides a comprehensive approach for migrating and managing archived documents within SAP systems. It ensures reliable migration, integrity verification, and seamless transition of documents and metadata to new archive systems. Customers often face challenges when renewing servers, purchasing new archive software, or consolidating archives, and our solution addresses these needs by ensuring data consistency and easy verification.

Benefits

- **Reliable Migration** – Provides verifiable migration lists and ensures proper archiving
- **Document Validation** – Allows detailed checks of archives at the document level
- **Seamless Reconciliation** – Enables re-migration of missing documents and link restoration

Solution Scope

- **Comprehensive Data Processing** – Supports all data types, including custom objects and fields, with instant master data updates.
- **Effortless SAP Integration** – Easily deployable across SAP systems and third-party solutions.

Business Process Covered

Backup Manager for SAP Integration Suite

Effortless Backup and Recovery for SAP Integration Suite

The SAP Integration Suite Backup Tool regularly backs up all artifacts on SAP Integration Suite (SAP BTP) to ensure data security and compliance. It enables one-click restoration for fast recovery and uninterrupted business operations.

Benefits

- **Business continuity** – Reliable fallback ensures operations are not interrupted
- **Time-saving recovery** – One-click restore significantly reduces recovery effort
- **Integrated with SAP BTP** – Native compatibility with SAP Integration Suite environments

Solution Scope

- **Automated Backups** – Regularly secures integration flows, configurations, and related objects in SAP Integration Suite
- **Data Security & Compliance** – Maintains audit-ready records and fulfills governance requirements
- **One-Click Restoration** – Rapid recovery of backups to minimize downtime

Business Process Covered

- Supports all Business Processes

Customer Problems & Challenges

- **Risk of data loss** – Missing automated backups can lead to loss of critical integration data.
- **Slow recovery processes** – Manual restoration delays operations and increases effort.
- **Compliance issues** – Without audit-ready backups, regulatory requirements may not be met

eAttendance

Attendance, Access, and Planning – All in One

eAttendance is an attendance management solution designed for large enterprises. It covers everything from positive attendance tracking to absence and shift planning, with full support for external personnel and access control systems such as eGates for vehicles. Built on HR data, the web app and backend solution ensures seamless integration with workforce operations and infrastructure.

Solution Scope

- ▶ **Positive Attendance Tracking** – Real-time monitoring of employee presence across locations
- ▶ **Absence & Shift Planning** – Efficient scheduling, covering permanent, temporary, and agency staff
- ▶ **Access Control Integration** – Supports eGates and systems for personnel, trucks, and cars

Business Process Covered

- ▶ Human Resources
- ▶ Compliance
- ▶ Analytics
- ▶ Enterprise Strategy
- ▶ Intelligent Technologies

Customer Problems & Challenges

- ▶ **Error Reduction** – Minimizes time-tracking mistakes and prevents buddy punching
- ▶ **Accurate Payroll** – Improves payroll precision and processing efficiency
- ▶ **Regulatory Compliance** – Ensures adherence to labor laws and standards
- ▶ **Greater Transparency** – Strengthens accountability and visibility for employees

Benefits

- ▶ **Centralized Workforce Management** – Brings together attendance, planning, and access in one platform
- ▶ **Real-Time Visibility** – Instant insight into workforce presence and capacity
- ▶ **Enhanced Security** – Controlled access to premises for staff and vehicles

Pay Slip Encrypted

Secure Pay Slips. One Panel

PSE – Pay Slip Encrypted is a control panel application designed to streamline pay slip processing. It enables PDF generation, encryption, and distribution via email or print. With support for both classic SAP PE51 formats and modern PDF outputs, it ensures secure, compliant, and efficient payroll communication.

Solution Scope

- ▶ **Conversion of pay slips into PDF format** – Generates digital versions for flexible distribution
- ▶ **Encryption** – Secures personal payroll data for email delivery
- ▶ **Sending by mail or printing** – Supports both digital and paper distribution channels

Business Process Covered

- ▶ Human Resources
- ▶ Compliance
- ▶ Sustainability

Customer Problems & Challenges

- ▶ **Safe and Compliant Pay Slip Delivery** – Need for a secure method to share pay slips with employees while respecting GDPR requirements.
- ▶ **Centralized Payroll Management** – Difficulty managing generation, encryption, and distribution of pay slips efficiently from a single system.

Benefits

- ▶ **Secure distribution** – Encrypted PDFs protect sensitive employee data
- ▶ **Flexible output** – Email or print, depending on recipient preference or compliance needs
- ▶ **Centralized control** – One place to manage all pay slip generation and distribution activities

Entrance & Permit Management

Streamlined permits and access, built on best practices

The Entrance and Permit Management solution is built on real customer best practices to streamline access control across facilities. It supports the full process from first-time person registration to handling one-time or recurring entrances for individuals, vehicles, and materials. Designed for flexibility and security, the solution ensures traceable, efficient permit and authorization management tailored to operational needs.

Benefits

- ▶ **Improved Security** – Only authorized individuals gain access to defined premises
- ▶ **Efficient Registration** – Streamlined onboarding for visitors, employees & contractors
- ▶ **Full Traceability** – Digital records of entrances, permits & registrations

Solution Scope

- ▶ **Permit & Authorization Management** – Based on proven customer best practices for controlled access
- ▶ **Visitor & Personnel Registration** – First-time and recurring individuals can be registered directly in the system
- ▶ **Access Scheduling** – Supports both one-time and regular entrance permits for people, vehicles, and materials

Business Process Covered

- ▶ Human Resources
- ▶ Supply Chain
- ▶ Service
- ▶ Compliance
- ▶ Analytics
- ▶ Intelligent Technologies
- ▶ Sustainability

Customer Problems & Challenges

- ▶ **Unauthorized Access Risks** – Difficulty ensuring that only authorized personnel, vehicles, or materials enter secure areas
- ▶ **Time-Consuming Registration Processes** – Manual or fragmented onboarding for visitors, employees, and contractors slows operations.

ADA – Axians Discovery Assessment

From Insight to Impact – Shaping Your End-to-End SAP S/4HANA Journey

The Axians Discovery Assessment (SAP ADA) helps companies develop a customized roadmap tailored to their specific requirements. It supports decision-making on which S/4HANA system best maps the company’s business processes and meets its organizational requirements.

Benefits

- ▶ **Transformation Planning** – Decision basis for the transformation to SAP S/4 HANA
- ▶ **Model Assessment** – Evaluation of operating models based on framework conditions
- ▶ **Cost Analysis** – Commercial evaluation and derivation of the bill of materials

Solution Scope

- ▶ **End-to-end business scope** – Moderated workshops to identify value-adding end-to-end processes
- ▶ **IT architecture** – Definition of the necessary interfaces to SAP
- ▶ **S/4 HANA strategy** – Analysis of the necessary security and compliance as well as scalability and reliability.
- ▶ **Licenses and billing models** – Definition of roles and responsibilities in the various operating models.

Business Process Covered

- ▶ Supports all Business Processes

Customer Problems & Challenges

- ▶ **Transformation Complexity** – Uncertainty about the optimal transformation approach
- ▶ **Missing Roadmap** – Lack of a roadmap for migration to SAP S/4HANA – when, how, with which modules?
- ▶ **Cloud Ambiguity** – Uncertainty about cloud models and licensing options (Cloud ERP vs. Cloud ERP private vs. on-premises).

Why Choose Axians?

Global strength, local proximity

Axians partners with industry leaders on a global scale, providing the expertise and reliability that major enterprises demand. We're not just local players—we operate at eye level with top-tier clients around the world.

360° Solution Portfolio

Our comprehensive offering spans across the leading technologies and platforms. Axians takes a holistic approach, delivering integrated, end-to-end solutions rather than isolated services.

Deep Expertise

Our specialists bring deep knowledge in Cloud & Data Center Infrastructure, Business Applications, Cybersecurity, Enterprise Networks, and custom development – driving your digital transformation forward.

Innovation that Opens Doors

With our own cutting-edge solutions, Axians helps clients unlock new opportunities and gain a competitive edge. Innovation isn't just a buzzword- it's how we create value.

Proven Track Record Across Industries

Axians delivers trusted solutions across diverse sectors, backed by a strong track record of success.

Strategic Partnerships

We work hand-in-hand with top technology vendors to bring best-in-class services and build strong, value-driven relationships with our clients.

Entrepreneurial Spirit

Innovation is in our DNA. Our entrepreneurial mindset fuels agile thinking, co-creation, and faster paths to breakthrough outcomes.

Smooth Cloud Transitions

Axians ensures seamless migration from on-premise setups to secure cloud environments – empowering businesses for tomorrow's challenges.
